

The high performance EJX930A multivariable transmitter features a single-crystal silicon resonant sensor and is suitable to measure liquid, gas, or steam mass flow. The EJX930A outputs a 4 to 20 mA DC signal corresponding to the measured differential pressure, static pressure, process temperature, or dynamically calculated and fully compensated mass flow.

FOUNDATION fieldbus protocol type is also available.

Key features:

- 1.0% mass flow rate accuracy over 1:10 flow range [HART protocol type]
- Simultaneous dual output of 4 to 20mA and pulse signals. [FOUNDATION Fieldbus protocol type]
- Various function blocks available; 5 AIs, AR, IT, SC, and IS as standard. PID as an optional feature.
- Cyclically displays up to 10 variables
- Software download function (option)
- Advanced diagnostic function (option)

PERFORMANCE SPECIFICATION

Zero-based calibrated span output, wetted parts material code S and silicone oil, unless otherwise mentioned.

For Fieldbus communication type, use calibrated range instead of span in the following specifications.

Specification Conformance

EJX series ensures specification conformance to at least $\pm 3\sigma$.

Mass Flow (For Measurement Function Code B)

Mass Flow Reference Accuracy

$\pm 1.0\%$ of Mass Flow Rate over 10:1 flow range. (100 :1 DP range) for liquids and gases.

Totalized Mass Flow Reference Accuracy

1.0% of Total Mass Flow.

Note: Assume 100:1 DP range for liquids and gases.

Conditions for mass flow accuracy

- (1) Auto compensation mode.
- (2) M and H capsule
- (3) Uncalibrated differential producer (Orifice) installed based on the following standards. *1
- (4) Uncertainties for discharge coefficient, primary device bore, pipe diameter, and gas expansion factor defined on following standards. *1
- (5) Density uncertainty less than 0.1%.

*1: Standards: ISO5167-1 1991, ISO5167-2 2003, ASME, MFC-3M 1989, AGA No.3 1992

FUNCTIONAL SPECIFICATIONS

Output specifications for HART Protocol Type

Output

Dual output (Both analog and pulse/contact output can be obtained simultaneously).

In this case refer to the item "Wiring example for analog output and status/pulse output".

Analog Output

Two wire 4 to 20 mA DC output, user-selectable for Differential Pressure, Static Pressure, External Temperature or Flow Rate signal.

Output range: 3.8 mA to 21.6 mA.

Digital HART FSK protocol are superimposed on the 4 to 20 mA signal.

Failure Alarm

Analog output status at CPU failure and hardware error

Up-scale: 110%, 21.6 mA DC or more (standard)

Down-scale: -2.5%, 3.6 mA DC or less

Pulse/Contact Output

Pulse or status output is selected by parameter setting.

Transistor contact output (sink type).

Contact rating: 10.5 to 30 V DC, 120 mA DC max.

Low level: 0 to 2 V DC. (Refer to Figure 1)

Figure 1. High and low level (Pulse output)

Pulse Output

Scaled pulse or frequency pulse output is selected by parameter setting.

Scaled Pulse Output Function

Pulse is output by the unit of the scaled flow rate. Scaled pulse can be totalized.

Frequency Output Function

Number of pulses output per second at 100% of output.

Pulse frequency: Max. 10 kHz

Duty cycles: Approx. 50% (1:2 to 2:1)

Contact Output Function

High or low alarm

Status signal output mode can be reversed (ON/OFF).

Output specifications for FOUNDATION Fieldbus Protocol Type

Output

Digital communication signal based on the FOUNDATION fieldbus specification.

Functional Specifications

Functional specifications for Fieldbus communication conform to the standard specification (H1) of FOUNDATION fieldbuses.

Function Block

Table 2. Function Block

Block name	Number	Execution time	Note
AI	5	30 msec	For flow, differential pressure, static pressure, external temperature and capsule or amplifier temperature.
SC	1	30 msec	An output of Signal characterizer block is a non-linear function of the respective input. The function is determined by a table.
IT	1	30 msec	Integrator block intergrates a variable as a function of the time of accumulates the counts.
IS	1	30 msec	Input Selector block provides selection of up to eight inputs and generate an output based on the configured action.
AR	1	30 msec	Arithmetic block allows simple use of popular measurement math functions.
PID	1	45 msec	Applicable when /LC1 option is specified.

T12E.EPS

LM Function

LM function is supported.

Advanced Diagnostics (optional)

• Impulse line blockage detection

The impulse line condition can be calculated and detected by extracting the fluctuation component from the differential pressure and static pressure signals. Also EJX930A detects the impulse line abnormality particularly which side of impulse line is plugged.

• Heat trace monitoring

The change of the flange temperature calculated by using the two temperature sensors built in the EJX930A enables to detect the heat trace breakage or the abnormal temperature due to the failure.

Damping Time Constant (1st order)

Amplifier damping time constant is adjustable from 0.00 to 100.00 seconds and added to response time, applicable for DP, SP, ET, and flow independently.

Zero Adjustment Limits

Zero can be fully elevated or suppressed, within the lower and upper range limits of the capsule, applicable for DP, SP, and ET independently.

External Zero Adjustment(for HART communication type)

External zero for DP is continuously adjustable with 0.01% incremental resolution of span.

Integral Indicator (LCD)

5-digit (Flow, DP, SP, and ET) or 6-digit (Total flow) numerical display, 6-digit unit display and bar graph. The indicator is configurable to display one or up to four variables periodically.

For FOUNDATION Fieldbus, the indicator is configurable to display up to ten function block output values.

Burst Pressure Limits

69 MPa (10000 psi)

Self Diagnostics

CPU failure, hardware failure, configuration error, process alarm for differential pressure, static pressure and capsule temperature.

■ Mass Flow Calculation

Auto Compensation Mode (FSA120 EJXMTTool is required for configuration)

Configuration of the fluid physical properties and primary element for the EJX900 series can be performed using a dialog window of FSA120. All flow factors for mass flow calculation are dynamically compensated to an optimum value. In Auto mode, mass flow can be measured with high accuracy.

The flow factors that are automatically compensated are discharge coefficient, diameter of primary device, upstream internal pipe diameter, gas expansion factor, density, and viscosity.

EJXMTTool: FSA120 EJX-MV configuration DTM (refer to GS 01C25R51-01E) . The software package is used to perform mass flow configuration for the EJX910A. These software can also read and write the general parameters of HART communications or FOUNDATION Fieldbus communication. Configuration of the fluid physical properties and the primary element of the EJX900 series can be done by means of a dialog menu.

Basic Flow Calculation Mode

Flow operation and density compensation are performed conventionally, with the flow factors being input manually.

The operational expression is switched by the fluid type and the unit setting.

Density compensation by phase

Gas: Compensation as ideal gas by temperature and pressure.

Liquid: Compensation by temperature.

Flow unit categories refer to Table 4.

Table 4. Flow Operational Expression

*1: ⚠ Users must consider the characteristics of selected wetted parts material and the influence of process fluids. The use of inappropriate materials can result in the leakage of corrosive process fluids and cause injury to personnel and/or damage to plant facilities. It is also possible that the diaphragm itself can be damaged and that material from the broken diaphragm and the fill fluid can contaminate the user’s process fluids. Be very careful with highly corrosive process fluids such as hydrochloric acid, sulfuric acid, hydrogen sulfide, sodium hypochlorite, and high-temperature steam (150°C [302°F] or above). Contact Yokogawa for detailed information of the wetted parts material.

- *1: Not applicable with color change option.
- *2: Applicable for Wetted parts material code **S**.
- *3: The unit of MWP (Max. working pressure) on the name plate of a housing is the same unit as specified by option codes **D1**, **D3**, and **D4**.
- *4: Applicable for vertical impulse piping type (Installation code **7**) and Wetted parts material code **S**.
- *5: Applicable for output signal codes **E**. The hardware error indicates faulty amplifier or capsule.
- *6: Applicable for wetted parts material code **S**; process connection codes **3**, **4**, and **5**; installation code **9**; and mounting bracket code **N**.
Process connection faces on the other side of zero adjustment screw.
- *7: Also see 'Ordering Information'.
- *8: Material traceability certification, per EN 10204 3.1B.
- *9: Applicable for process connections codes **5**.
- *10: Applicable for process connections codes **3** and **4**.
- *11: The unit on the certificate is always Pa unit regardless of selection of option code **D1**, **D3** or **D4**.
- *12: Pure nitrogen gas or pure water is used for oil-prohibited use (option codes **K1**, **K2**, **K5**, and **K6**).
- *13: Applicable for output signal code **-F**.
- *14: Applicable for measurement span code **M** and **H**. If compliance with category III is needed, specify this code.
- *15: 316 or 316L SST. The specification is included in amplifier code **2**.
- *16: The change of pressure fluctuation is monitored and then detects the impulse line blockage. See TI 01C25A31-01E for detailed technical information required for using this function.
- *17: This option code must be specified with option code **EE**.

*1: To avoid the influence of external noise, use an electric counter which fits to the pulse frequency.

*2: Resistor is not necessary in case of an electric counter which can receive contact pulse signal directly.

< Ordering Information for HART communication type>

Specify the following when ordering

1. Model, suffix codes, and option codes
2. Calibration range and units
 - 1) Calibration range can be specified with range value specifications up to 5 digits (excluding any decimal point) for low or high range limits within the range of -32000 to 32000.
When reverse range is designated, specify Lower Range Value (LRV) as greater than Upper Range Value (URV).
 - 2) Specify unit from the tables "Calibration Units"
3. Static pressure is selected from gauge pressure or absolute pressure.
4. Tag Number (if required)
For HART communication type, specify software tag (up to 8 letters) to be written on the amplifier memory and Tag number (up to 16 letters) to be engraved on the tag plate separately.
5. Other factory configurations (if required) Specifying option code **CA** will allow further configuration at factory. Following are configurable items and setting range.
 - 1) Descriptor (up to 16 characters)
 - 2) Message (up to 30 characters)
 - 3) Software damping in second (0.00 to 100.00)

< Ordering Information for FOUNDATION Fieldbus communication type>

Specify the following when ordering

1. Model, suffix codes, and option codes
2. Calibration range and units for Differential pressure, Static pressure and external temperature
 - 1) Calibration range can be specified with range value specifications up to 5 digits (excluding any decimal point) for low or high range limits within the range of -32000 to 32000. When reverse range is designated, specify Lower Range Value (LRV) as greater than Upper Range Value (URV).
 - 2) Specify unit. See Table 8-2 for settable unit at factory.
3. Static pressure is selected from gauge pressure or absolute pressure.
4. Tag Number (if required)

Specify software tag (PD_TAG) up to 32 letters to be written on the amplifier memory and Tag number up to 16 letters to be engraved on the tag plate separately.
5. Output mode(AI1 L_TYPE) ;

Select one from 'Direct', 'indirect Linear' or 'indirect SQRT' for output mode of AI1(Differential pressure).
6. Output scale and unit(AI1 OUT_SCALE);

This setting is used for Indicator and output of AI1 block for Differential pressure. The scale range can be specified with range limit specifications up to 5 digit(excluding any decimal point) for low and high range limits within the range of -32000 to 32000. When AI1 L_TYPE is Direct, these setting does not affect the output of AI1 block.
7. Specify Node address in hexadecimal.
8. Select 'BASIC' or 'LINK MASTER' for Operation Functional Class.
9. Other factory configurations (if required) Specifying option code **CC** will allow further configuration at factory.

Following are configurable items and setting range.
